

ALFALFA WAFERS - CP 14%

Dehydrated alfalfa wafer with protein content min. 14% on dry matter basis.

Pure alfalfa naturally grown on Italian fields, dehydrated and compressed into wafer through a mechanical process that involves no additives or glues. The production process preserves the alfalfa's distinguishing original nutritional properties : protein, minerals, lipids, fats, vitamins, pro-vitamins, polyunsaturated fats (omega 3 and omega 6), sugar, organic acid and carotene.

The compression into wafer increases animal's ingestion capacity together with product's digestibility. This shape is easy to store, carry and administer in every season and under all farming conditions

PACKAGING:

- In bulk;
- In 1000 kg jumbo bags;
- In 18 kg bags placed on pallet (60 bags each);

WAFER DIMESION:

cm 3 x 3 or cm 6 x 6

COMPONENTS:

Medicago Sativa

ANALYTICAL DATA

(% on dry matter basis):

Moisture	11% max
Protein	14% min
Fiber	32% max
Ash	11% max
NDF	60%
NFV	60

USE:

Up to 10% of the dry matter daily ration, in association with cereals, forages or complete feed as per nutritionist's suggestion.

Loose alfalfa

Alfalfa wafer
